Global Asset Tracking with 1-Year Battery Life

- Independent form nearby Phones
- Works in **200** Countries
- No Roaming cost
- Current **Location**
- History** of Transport locations
- Temperature** & RH records
- Real-time temperature **Alarm**
- Rechargeable** Battery

BUY
\$339 (USD)
\$449 (CAD)
30 Days Return
2 Years Warranty

RENT
\$4.49 (USD/Day)
\$5.99 (CAD/DAY)
+ Tax & Postage
\$200 deposit

FEATURES

- Global Coverage**
Works in 200 countries (anywhere with Cellular Coverage)
- High Sampling Rate**
Recording Temperature and RH Every Minute
- Easy Integration**
Possibility of sending and receiving data via API
- Food Safety Reports**
In compliance with FDA CFR 21 Part 11

- No External Power Supply**
Long Battery Life (6 to 12 months / Recharge)
- No access to the sky is required**
Works inside the referees and containers
- No cooperation from the driver**
Performs independently from the operators
- No Gateway**
Connects dDirectly to the Cellular Network

- Powerful Online Application**
Online application with capability of:
 - sharing access with unlimited number of users
 - Multi time zone and multi language support
 - Geo, table and mobile view
 - Generating various reports and graphs

Long Term Lease: Let's talk

LoggerFlex's cellular tracker surpasses Bluetooth AirTags in several key aspects. Firstly, our cellular tracker provides global coverage, enabling you to track your assets anywhere in the world, whereas Bluetooth AirTags have limited range and are dependent on proximity.

Moreover, the cellular tracker boasts an impressive one-year battery life, ensuring long-term reliability without frequent replacements. In contrast, Bluetooth AirTags may require more frequent battery changes, impacting their continuous tracking capability.

Additionally, our cellular tracker offers real-time temperature and humidity alarms, providing crucial environmental monitoring for sensitive assets. This feature is not present in Bluetooth AirTags, making our solution ideal for industries such as pharmaceuticals, food, and cold chain management.

Furthermore, the cellular tracker includes location history and temperature logs, offering a comprehensive overview of your asset's journey and environmental conditions. Bluetooth AirTags lack these extensive data logging capabilities.
